Attorney Docket No: 1059.00131

IN THE SPECIFICATION:

Please amend paragraph [0019] as follows:

[0019] Balloons need to be inflated periodically to prevent acute ischemia in the

distal territory of the parent artery. Currently, this is a well accepted method of

endovascular treatment of wide neck aneurysm. However, this is by no means easy

or safe all the time and requires significant expertise and experience on een the part

of the operator.
